

How to make a picture window design.

Draw a design on to black paper. Make it as large as you can. You could choose a fish, a bird, a monster, a flower. At this stage you are drawing the **outline** of the shape only. Cut your design out, cutting around the outline of the picture only.

Next you can start to cut shapes and detail out from inside the design. You can use scissors to do this. For the fish, shapes have been cut for the eyes, body and tail.

Cover the back of your design with coloured paper. You can stick whole pieces to cover one part of your design, and trim off what you don't need. Or you can add strips of coloured paper to make stripes.

Now you can add more black or coloured paper to add more detail to your design. For the fish, detail has been added for the eyes, scales and tail.

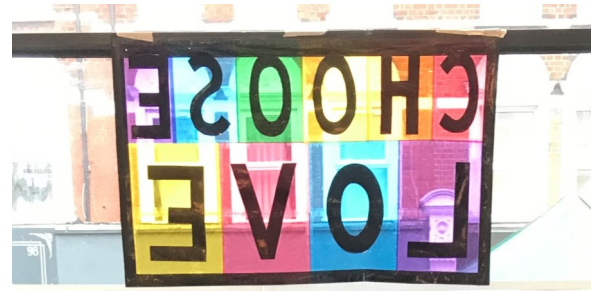

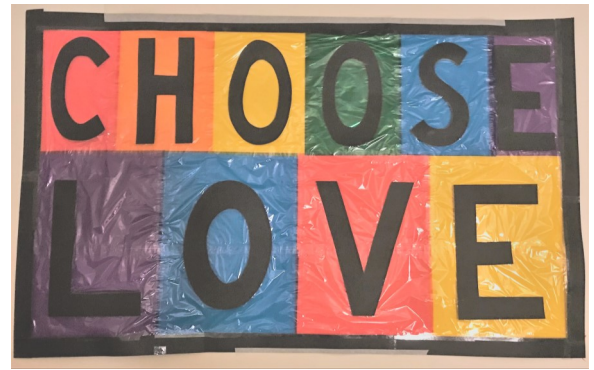

Here are some ideas for making window pictures

You could make animals, insects, plants, flowers, monsters, dragons, or even just big bright shapes like circles and triangles.

You could make faces or portraits of yourself or people in your family (though smaller detail may need to be cut out with a craft knife. You will need an adult to help you with this)

You could also create 'word' designs, so that people who walk past your window can read them!

In this window design, a child's drawing was made into a giant window picture!
