

Window collage

Materials

You will need:

- Red, Orange, Yellow, Green, Blue and Purple tissue paper
- Scissors
- Sellotape

Start by making a small shape which is the same shape as the window. Eg. A rectangle for a rectangular window, a square for a square window etc.

Next, cut your strips of tissue paper. It doesn't matter what length they are but they all need to be roughly the same width. These were around 5cm.

Start to stick your strips of tissue paper around the centre shape. It doesn't matter if the shapes slightly overlap, or aren't completely straight! Use small bit of sellotape to secure each strip.

Continue to add the strips around the centre shape. You are working 'backwards' in the order of the rainbow colours, so purple through to red.

When you've finished going around the whole shape in one colour, change the colour of your strips, to the next colour in the rainbow.

Go from purple, to blue, to green, to yellow. Its doesn't matter where the strips overlap.

Keep adding the strips...

Almost there...

A rainbow! Or you could use this technique to make other designs...

Other window collage ideas....

Younger children will love sticking shapes on the window. You can create some really effective windows, by sticking lots of simple geometric shapes together, like squares, rectangles or triangles. You can experiment with making designs with shapes...
